EXECUTIVE SUMMARY

The Fixed Service (FS) is and remains a key service for telecommunication infrastructure development. Since 1997, the CEPT has provided public information to present a picture of the FS deployment in Europe with the intention to use it as a reference and for guidance purposes for administrations, operators and manufacturers. ECC Report 173 [link](#) includes the quantitative information on FS usage in Europe and has to be seen in combination with this Report to get a concise overview on FS usage in various frequency bands over Europe for FS related spectrum inventory purposes.

Annex 2 of the present Report provides the National implementation information for the FS channel arrangements covered by ECC/ERC Recommendations and Annex 3 provides related National restrictions.

...	...

Standard for Point-to-Point (P-P) systems, including antennas, cover a very large range of traffic capacities, channel separations (CS), modulation formats and applications over a very wide range of frequency bands. The generic standard for P-P digital fixed radio systems and antennas is EN 302 217.

Standards for Multipoint systems (MP), including antennas, cover a very large range of traffic capacities, channel separations (CS), modulation formats and applications over a very wide range of frequency bands: from 30 MHz to 43.5 GHz for equipment and from 1 GHz to 43.5 GHz for antennas. With the exception of systems and antennas dedicated to the band 40.5-43.5 GHz all other equipment operating in bands from 30 MHz to 33.4 GHz and antennas are specified in the generic standard for Multipoint digital fixed radio systems and antennas, EN 302 326. The scope of this standard also includes Multipoint digital nomadic radio systems. By exception P-MP equipments operating in the frequency range 40.5-43.5 GHz are subject to a specific harmonised standard, EN 301 997.

RIS Template Guidelines for the Fixed Service

The [Radio Equipment Directive \(RED\) 2014/53/EU](#): OJ L153 22 May 2014 replaces the Radio & Telecommunication Terminal Equipment Directive (R&TTE Directive)1999/5/EC, repealed with effect from 13 June 2016. For further information, see “When does the RE-D start applying” in [FAQs – Radio Equipment Directive \(RE-D\) on the EC Website](#).

Information on “Interface regulations & specifications” can be found in the RED Guide, which will soon be published on the [EC website](#).

For the Fixed Service, the following terminology is defined and used in Annex 2 of [ECC Decision \(01\)03](#) and can be seen below in Table 6:

Table 6 : RIS Template Guidelines for the Fixed Service

Layer1	Layer2	Layer3
Fixed	BWA	BFWA
Fixed	MFCN	IMT
Fixed	Point-to-Multipoint	MWS, Scanning telemetry, Subscriber access excluding MWS, Unplanned, uncoordinated fixed links
Fixed	Point-to-Point	Private fixed networks, Public fixed networks, SAP/SAB P to P audio links, SAP/SAB P to P video links, Unplanned uncoordinated fixed links

Administrations should select one of these terms for their national radio interfaces for Fixed Service applications.

From the above explanations, it can be concluded that Member States shall notify radio interfaces for Fixed Service applications and that these applications are Class 2 equipment, i.e. subject to restrictions in one or more EU, EEA and EFTA countries.

A RIS template with explanations that can be used by administrations when creating a radio interface specification, see [document FM\(17\)116](#).
